Thrombopoietic peptides which activate mpl receptors and increase production of platelets or platelet precursors, useful for treatmediseases which involve thombocytopenia. the of.

N-PSDB;

AAA29220.

Disclosure; Page 76-77; 91pp; English.

A compound which binds to an mpl receptor comprising a thrombopoietin mimetic peptide (TMP) dimer joined by a linker [TMP_1-(L_1) nTMP_2], is new. TMP_1 and TMP_2 are amino acid sequences varying from at least 10 to 14 residues in length comprising $x_2 - x_1$ 0, $x_2 - x_1$ 1, $x_2 - x_1$ 2, $x_2 - x_1$ 1, $x_3 - x_1$ 2, $x_3 - x_1$ 2, $x_3 - x_1$ 3, $x_3 - x_1$ 4, $x_3 - x_1$ 0, $x_3 - x_1$ 1, $x_3 - x_1$ 3, and $x_3 - x_1$ 3, $x_3 - x_1$ 4, $x_3 - x_1$ 5, $x_3 - x_1$ 6, $x_3 - x_1$ 7, $x_3 - x_1$ 7, $x_3 - x_1$ 8, $x_3 - x_1$ 8, $x_3 - x_1$ 8, $x_3 - x_1$ 9, $x_3 - x_1$ 8, $x_3 - x_1$ 9, $x_3 - x_1$ 9, $x_3 - x_1$ 1, $x_3 - x_1$ 2, $x_3 - x_1$ 3, $x_3 - x_1$ 1, $x_3 -$

The compounds bind to and activate the c-Mpl receptor which mediates the activity of endogenous thrombopoietin. The TWPs are useful for increasing the production of platelet precursors (e.g. megakaryocytes) in a mammal, which is useful for treatment of diseases which involve thombocytopenia, e.g. aplastic anaemia, immune thrombocytopenia (ITP), human immunodeficiency virus associated ITP, and systemic lupus erythematosus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TTPO; CTLA4; mimetic; IL-1; TWF; antagonist; MMP; inhibitor; erythropoietin; thrombopoietin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor;
                                                                                                         Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                        23-OCT-1998;

This can be used to correct misfolding of Fc domain containing proteins, for use in therapeutic agents which may be used in the treatment of cancer, inflammation, transplant rejection, AIDS, osteoarthritis and obesity. The present sequence is the IgG1 Fc domain

The vehicle is covalently attached to the glucagon antagonist domain. The compositions are administered to treat non-insulin dependent diabetes mellitus. The present sequence is the human IgG Fc domain, which may be used as the vehicle in the compositions

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
```

Composition comprising integrin or adhesion vehicle, useful for treating or preventing planger half-life than free peptide.

platelet

antagonistic peptide platelet aggregation,

and has

ğ

The invention relates to a composition comprising

an integrin/adhesion

Claim 9;

Fig 3; 68pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to therapeutic agents that modulate the activity calcitonin (CT) receptor. Modulators of CT receptor comprise a CT receptor modulating domain and a vehicle such as a polymer or an FC domain, where the vehicle is covalently attached to the CT receptor modulating domain. The compositions comprising CT receptor modulating domain. The present sequence is human immunoglobulin G (IgG1) Fc protein used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Compositions comprising Calcitonin receptor modulator domains, useful treating osteoporosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a composition (I) comprising modulators of parathyroid hormone (PTH) and parathyroid hormone-related protein (PTHP) (C) which comprise a PTH/PTHP modulating domain and a vehicle. (I) (C) comprising PTH agonist optionally with a bone resorption inhibitor, such (C) as osteoprotegrin (OPG), OPG-L antibody, calcitonin, bisphosphonates, (C) cestrogens, oestrogen receptor modulators and tibolone is useful for treating osteopenia. (I) is useful for therapeutic and prophylactic (C) purposes. Antagonists of PTH receptor are useful in treating primary and (C) secondary hyperthyroidism, hypercalcaemia, tumour metastases, (C) particularly breast and prostate cancer, cachexia and anorexia, (C) particularly breast and prostate cancer, cachexia and anorexia, (C) osteopenia, including various forms of osteoporosis, Paget's disease of (C) bone, osteomyelitis, osteonecrosis or bone cell death, associated with (C) traumatic injury or nontraumatic necrosis associated with Gaucher's (C) disease, sickle cell anaemia, systemic lupus erythematosus, rheumatoid (C) arthritis, periodontal disease and alopecia. PTH receptor agonists are (C) useful as therapeutic agents in conditions including fracture repair (including healing of non-union fractures), osteopenia, including various forms of osteoperias. AAU73018-AAU73181 represent parathyroid hormone conditions including tracture and (C) and parathyroid hormone related protein (PTH/PTHrP) modulators and (C) related amino acid sequences of the invention

                                                                                   The invention relates to a thrombopoistin mimetic peptide (TWP) (I) that CC binds to the c-mpl (mpl) receptor, and which stimulates the production of platelet precursors, is new Further CC disclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition comprising (II) and a carrier. The CC pharmaceutical composition of the invention is useful for treating CC thrombocytopaenia in an animal, and for increasing megakaryocytes or CC platelets in a patient. The TWP of the invention is useful for treating CC conditions involving a megakaryocyte and/or platelet deficiency, e.g. CC disease conditions involving thrombocytopaenia such as aplastic anaemia, CC autoimmune tharombocytopaenia, Hughe's syndrome and lupoid thrombocytopaenia. The TWP of the invention is also useful for megakaryocytes and its derived cells. The compounds demonstrate an improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds have superior thrombopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryotypopietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryotypopietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryotypopietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of the compounds also exhibit superior therapeutic properties, such as improved plasma half-life, biological activity and in vivo circulation time. The current sequence represents the human IgGl Fc protein that may be used as a preferred represents the human IgGl Fc protein that may be used as a preferred represents.

The present invention describes a peptide (I) that is capable of modulating nerve growth factor (NGF) activity. Also described: (1) modified peptide (II) comprising (I) and a vehicle, where the modified peptide is capable of modulating NGF activity; (2) dimer or multimer of (I); (3) modified peptide (III), its multimers or its salt, where the

(I) has analgesic activity, and can be CC used as an inhibitor of NGF. (I) is useful for treating or preventing a CC disease or disorder associated with NGF activity by administering (I) to CC human or animal. The disease or disorder chosen from neurologic pain, CC painful diabetic neuropathy, post-herpetic neuralgia, inflammatory pain, CC dental pain, pain from trauma, surgical pain, pain resulting from CC amputeation or abscess, causalgia, demyelinating diseases, trigeminal CC neuralgia, chronic alcoholism, stroke, thalamic pain syndrome, diabetes, CC acquired immuno deficiency syndrome (AIDS), toxins and chemotherapy, CC general headache, cluster headache, mixad-vascular and non-vascular CC syndromes, tension headache, general inflammatory bowel disorders, inflammatory bowel disorders, inflammatory bowel disorders, components and control of the components of the control of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a composition comprising the formula (I): (I) P1 - (L1)a-F1, where F1 = a vehicle and is attached at the C-terminus of P1- (L1)a or through a sidechain at any residue from residue 14 through the C - terminal residue; P1 = a parathyroid hormone/parathyroid hormone-related protein (PTH/PTHFP) modulating domain; L1 is a linker; and a = 0 or 1. The composition of matter is useful for treating osteopenia. This sequence corresponds to a human IgG Fc used in the invention.

                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes composition of matter (I) comprising an CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(CC (L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, CC P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, CC c, d, e, and f = are each independently 0 or 1, provided that at least 1 CC of a and b is 1. The composition can have cytostatic, antiasthmatic, CC thrombolytic and immunosuppressive activities. DNAs, vectors and host CC compositions. The compositions are useful for treating cancer, asthma, CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions CC such as Fc receptor binding, protein A binding, complement fixation, and CC possibly placental transfer. AAA69443 to AAA69526 and ABB16955 to CAAB18003 represent nucleotide and amino acid sequences used in the

The present invention describes a vehicle-peptide molecule (I) or its cmultimers. (I) can have antiinflammatory, antitumour, immunosuppressive, cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological, antianaemic, antirheumatic, antiarthritic, antidiabetic, ophthalmological, can antiaremic, antiaremic, antiaremic, ophthalmological, antianaemic, anorectic, antiinferrility, haemostatic, dermatological and comeuroprotective activities. (I) can be used as therapeutic or cytostated proteins of a sease scharacterised by dysfunction of their associated protein of interest, for identifying normal purposes. (I) is useful for their associated composes of interest, as a part of diagnostic kit to detect the presence of their cytoteins of interest in a biological sample. Additionally, (I) is useful for treating inflammatory and autoimmune diseases, tumour growth, cancer, composed arthritis, diabetic retinopathy, obestly, sleep disorders, composed arthritis, diabetic retinopathy, obestly, sleep disorders, commettic compounds are useful for treating disorders characterised by low cred blood cell levels such as anaemia. The TPO-mimetic comprising EPO-mimetic compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic cumour which result in thrombocytopaenia, splastic anaemia, metastatic composed and Fanconi's syndrome. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

G gamma-3 heavy chain disease proteins - human

C;Species: Homo sapiens (man)

C;Date: 31-Dec-1979 #sequence revision 23-Oct-1981 #text_change 16-Jul-1999

R;Prangione, B.; Prangione, B.; Franklin, E.C.

A;Cocsesion: A90442; MUID:81021548; PMID:6774747

A;Contents: heavy chain disease protein Wis

A;Accession: A90442

A;Molecule type: protein

A;Rote: the sequence: UNIPARC:UPI0000173797

A;Cocsesidues: 1-289-cFRA-

A;Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interchain A;Note: the sequence of residues 42-76 was taken from the reference that follows

R;Michaelsen, T.E.; Frangione, B.; Franklin, E.C.

J. Biol. Chem. 252, 883-889, 1977

A. Fills: Primary etruncture of the 'hinge' region of human IGG3. Probable quadruplication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A,Molecule type: mRNA
A;Molecule type: mRNA
A;Residues: 12-70;72-114;116-125,'E',127-133,'L',135-136,'E',138,'Y',140-154,'D',156-157
A;Cross-references: UNIPARC:UPI000017379A; UNIPARC:UPI000017379B; UNIPARC:UPI000017379C;
A;Note: a carboxyl-terminal Lys is removed posttranslationally
A;Note: this sequence may represent an allelic form or another gamma chain subclass
C;Comment: The heavy chain disease protein Wis is shown.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A;Note: cysteines at positions 24, 27, 33, 39, 42, 48, 54, 57, 63, R;Wolfenstein-Todel, C.; Frangione, B.; Prelli, F.; Franklin, E.C. Ig gamma 2b chain constant region - pig (fragment)
C;Species: Sus scrofa domestica (domestic pig)
C;Date: 21-Feb-1997 #sequence_revision 21-Feb-1997 #text_ch
C;Accession: I47160
R;Kacskovics, I; Sun, J; Butler, J.E.
J. Immunol. 153, 3565-3573, 1994
A;Title: Five putative subclasses of swine IgG identified f
A;Reference number: I47158; MUID:95015845; PMID:7930579
A;Accession: I47160
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: mENA
A;Residues: 1-328 <KAC>
A;Cross-references: UNIPARC:UPI0000115525; EMBL:U03780; NID
C;Genetics:
A;Gene: IgG2b
C;Superfamily: immunoglobulin C region; immunoglobulin homo
F;133-202/Domain: immunoglobulin homology <IMM>

A;Title: Interchain disulfide bridges of guinea pig gamma-2- immunoglobulin.
A;Reference number: A90354; MUID:71058474; PMID:492544
A;Rontente: annotation; disulfide bonds
A;Note: Cys-16 is involved in a heavy-light chain bond
A;Note: Cys-105; Cys-107, and Cys-110 form inter-heavy chain bonds
C;Comment: This chain was isolated from pooled serum of strain 13 inbred guinea pigs.
C;Comment: This chain was isolated from pooled serum of strain 13 inbred guinea pigs.
C;Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kar hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into 1:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Cross-references: UNIPARC:UPI000017379F
